Business Requirements Document (BRD)

Advanced CRM System

---

1. Document Information

Item	Details
Project Name	Advanced CRM System
Document Type	Business Requirements Document
Version	1.0
Prepared By	Vijay
Date	16-03-2026

---

2. Project Overview

2.1 Purpose

The purpose of the Advanced CRM System is to provide a centralized platform for managing customer relationships, leads, sales pipelines, communication activities, and follow-up reminders.

The system will enable sales teams to efficiently track leads, manage interactions, schedule follow-ups, and improve conversion rates through structured workflows and automation.

---

3. Business Objectives

The CRM system aims to achieve the following objectives:

- Centralize customer and lead information
- Improve lead tracking and conversion rates
- Enable sales pipeline visibility
- Automate follow-up reminders
- Support bulk data import through CSV
- Allow dynamic custom field creation
- Improve team collaboration and productivity
- Provide advanced reporting and dashboards

---

4. Scope

4.1 In Scope

The CRM system will include the following modules:

- Lead Management
- Contact Management
- Sales Pipeline Management
- Activity and Task Tracking
- Follow-up Reminder Management
- CSV Import with Field Mapping
- Dynamic Custom Fields
- Reporting and Analytics
- Role-Based Access Control
- Integration with external systems

4.2 Out of Scope

The following functionalities are not included in the initial version:

- Accounting system
- Inventory management
- Payroll or HR system
- ERP features

These may be integrated in future releases.

---

5. Stakeholders

Stakeholder	Responsibility
Business Owner	Defines business goals
Sales Team	Uses CRM to manage leads
Marketing Team	Tracks campaigns and lead sources
Customer Support	Handles customer issues
Development Team	Builds and maintains CRM
System Administrator	Manages system configuration

---

6. User Roles

6.1 Administrator

Permissions include:

- Manage users and roles
- Configure CRM modules
- Create custom fields
- Configure lead stages
- Manage workflows and automation
- View system-wide reports

6.2 Sales Manager

Permissions include:

- Manage sales pipeline
- Assign leads
- Monitor team performance
- Access sales reports

6.3 Sales Executive

Permissions include:

- Create and update leads
- Manage follow-ups
- Log activities
- Update lead stages

6.4 Support Agent

Permissions include:

- View customer records
- Manage support activities
- Track customer interactions

---

7. Functional Requirements

7.1 Lead Management

The system shall allow users to create, manage, and track leads from multiple sources.

Features

- Create leads manually
- Import leads through CSV
- Assign leads to users
- Track lead status and stage
- Add notes and attachments
- Maintain interaction history

Standard Lead Fields

- Lead ID
- Name
- Email
- Phone
- Company
- Lead Source
- Assigned User
- Lead Stage
- Created Date

7.2 Lead Stage Management

Lead stages represent the current position of a lead in the sales process.

Requirements

The system shall allow administrators to create and manage lead stages dynamically.

Stage Management Features

Administrators can:

- Create new lead stages
- Edit stage names
- Delete or deactivate stages
- Reorder stages
- Assign stage colors

- Mark stages as final (Won/Lost)

Example Lead Stages

- New Lead
- Contacted
- Qualified
- Follow-up
- Proposal Sent
- Negotiation
- Closed Won
- Closed Lost

7.3 Follow-up Reminder Management

The CRM shall allow users to schedule follow-up reminders for leads.

Features

Users can:

- Schedule follow-up date and time
- Add notes for follow-up
- Mark follow-up as completed
- Snooze or reschedule reminders

Reminder Notification

When the scheduled follow-up date and time is reached:

- The reminder shall appear at the **top notification area**
- The reminder shall appear on the **dashboard widget**
- A **notification bell icon** shall display pending reminders

Reminder Status

Each follow-up reminder shall have the following statuses:

- Pending
- Due
- Completed
- Missed
- Snoozed

- Rescheduled

7.4 Activity Tracking

The CRM shall track all user activities related to leads.

Activities Include

- Calls
- Emails
- Meetings
- Tasks
- Follow-ups

Features

- Activity timeline
- Activity reminders
- Calendar integration

7.5 CSV Import with Field Mapping

The system shall allow users to import leads using CSV files.

Import Process

Step 1: Upload CSV file
Step 2: System reads CSV column headers
Step 3: Display field mapping interface
Step 4: Map CSV fields to CRM fields
Step 5: Create new fields if required
Step 6: Validate data
Step 7: Import records

7.6 Dynamic Custom Field Creation

The CRM shall support dynamic custom fields.

Users can create new fields during the import process or from the CRM settings.

Field Properties

Each field shall include:

- Field Label
- Field Name

- Field Type
- Required Flag
- Unique Flag
- Default Value

Supported Field Types

- Text
- Number
- Date
- Dropdown
- Checkbox
- Currency
- Email
- Phone
- Textarea

7.7 Field Mapping Interface

During CSV import, users shall be able to map CSV columns to CRM fields.

Mapping Options

For each CSV column:

- Map to existing CRM field
- Create new CRM field
- Skip column

Example Mapping

CSV Field	CRM Field
name	first_name
email	email
phone	mobile
company	company
city	city
budget	budget

CSV Field	CRM Field
lead_source	lead_source

7.8 Duplicate Detection

The CRM shall detect duplicate leads during CSV import.

Duplicate Criteria

Duplicates shall be detected using:

- Email
- Phone
- External ID

Duplicate Handling Options

Users may choose to:

- Skip duplicate records
- Update existing records
- Allow duplicates

7.9 Reporting and Dashboards

The CRM shall provide analytics dashboards and reports.

Reports

- Lead conversion rate
- Sales pipeline value
- Revenue forecast
- Team performance
- Activity reports

Dashboard Widgets

- Total leads
- Leads by source
- Due follow-ups
- Sales performance

7.10 Role-Based Access Control

The CRM shall support role-based permissions.

Permission Types

- View records
- Edit records
- Delete records
- Import data
- Export data
- Configure modules

---

8. Integrations

The CRM shall integrate with external systems.

Supported Integrations

- Gmail
- Outlook
- WhatsApp API
- SMS Gateway
- Website lead forms
- Marketing automation tools

---

9. Non-Functional Requirements

9.1 Performance

The system shall support:

- 10,000+ leads
- 1,000 concurrent users

Page loading time shall be less than **2 seconds**.

9.2 Scalability

The system shall support:

- Multi-company usage
- High-volume data storage

- Horizontal scaling

9.3 Security

Security measures shall include:

- Role-based access control
- Data encryption
- Audit logs
- Two-factor authentication

9.4 Backup

The system shall perform:

- Daily database backups
- Weekly full backups

---

10. User Interface Requirements

The CRM interface shall provide:

- Responsive design
- Clean dashboards
- Easy navigation
- Advanced search and filters
- Drag-and-drop pipeline management

---

11. Success Metrics

The success of the CRM implementation shall be measured by:

- Increased lead conversion rate
- Reduced response time to leads
- Improved sales team productivity
- Higher customer engagement

---

12. Future Enhancements

Future versions of the CRM may include:

- AI lead scoring
- Predictive analytics
- Chatbot integration
- Voice call integration
- Mobile CRM application
- Advanced workflow automation builder
